

COGNIFYZ IT SOLUTIONS

Python Development Internship

Level 1 Task Report

Submitted By: Yash Garg

Position: Python Development Intern

Internship Duration: 27 May 2026 – 27 June 2026

Introduction

This report contains the Level 1 tasks completed during the Python Development Internship at Cognifyz IT Solutions. The tasks were designed to strengthen fundamental Python programming concepts including string manipulation, conditional statements, functions, loops, and user input handling.

Task 1: String Reversal

Objective

Create a Python function that takes a string as input and returns the reverse of that string.

Description

The program accepts a string from the user and reverses it using Python string slicing.

Concepts Used

- Functions
 - Strings
 - User Input
 - String Slicing
-

Task 2: Temperature Conversion

Objective

Convert temperatures between Celsius and Fahrenheit.

Description

The program accepts a temperature value and its unit from the user and converts it to the corresponding temperature scale.

Concepts Used

- Conditional Statements
 - User Input
 - Arithmetic Operations
-

Task 3: Email Validator

Objective

Validate whether a given email address follows a basic email format.

Description

The program checks for the presence of '@' and '.' symbols to determine whether an email address is valid.

Concepts Used

- Strings
 - Conditional Statements
 - User Input
-

Task 4: Calculator Program

Objective

Develop a basic calculator capable of performing arithmetic operations.

Description

The calculator accepts two numbers and an operator from the user and performs the selected operation.

Concepts Used

- Conditional Statements
 - Arithmetic Operators
 - User Input
-

Task 5: Palindrome Checker

Objective

Determine whether a given string is a palindrome.

Description

The program compares the original string with its reversed version and identifies whether it is a palindrome.

Concepts Used

- Strings
 - Conditional Statements
 - String Slicing
-

Conclusion

Through the completion of Level 1 tasks, fundamental Python programming concepts such as strings, functions, user input, conditional statements, and arithmetic operations were successfully implemented and practiced.
